Consumable
C-WingButton Lateral Distal Fibula Plates

- Achieve stable anatomical elastic fixation.
- Allows for earlier weight-bearing exercises.
- Low-profile design, with finely polished thin titanium plate and smooth contours, reducing the risk of postoperative pain and tendonitis.
- Avoids a second surgery for removal.
- No complications of screw breakage compared to screw fixation.

* Serious syndesmotic ligament injuries can be reinforced with two fixation titanium plates; the second fixation titanium plate should be placed 1 cm above the first, with a slight axial divergence to increase rotational stability.

*The system can be used in conjunction with plates and screws. With a low-profile design, the round titanium plates can fit into the screw holes.

Product	Product Code	Specification	
WingButton	A301018	Adjustable-12×3.5×1.5-6	Large Button
CloverButton	A301020	12×8×1.5	
WingButton	A301018	Adjustable-12×3.5×1.5-6	Small Button
CloverButton	A301014	11×8×1.5
